

**Step 3.** Using a small Phillips screwdriver loosen the wire retainer that fastens the aileron potentiometer wires to the aileron gimbal frame.

**Step 4.** Rotate the wire retainer and route the aileron wires around the mounting post and position the wires as shown.

**Step 5.** Place a very small amount of shoe goo adhesive on the wires to cover any worn wire insulation. Do not substitute any other adhesive type. If the wire damage is severe (worn through insulation, frayed wire, cut strands) please return the system for service.

**Step 6.** Reinstall the back of the transmitter case. If you have any further questions or problems, please contact Horizon Product Support at 877-504-0233. Thank you!
